DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the limitation "each of the pads per se having a concave surface" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claim 6 is rejected under 35 U.S.C. 102(e) as being anticipated by Chigawa.

Regarding claim 6, Chigawa et al disclose on **figure 32B** a structure comprising a semiconductor device having bumps 4; a board 2 having pads 6 so that each of the bumps is joined to a corresponding one of the pads, each of the pads 6 per se having a concave surface with which a corresponding one of the bumps contacts; and an

Art Unit: 2815

insulating adhesive 7 provided between the semiconductor device and the board, an end of each of the bumps 4 has a diameter smaller than other portions of the bumps;... wherein contraction of the insulating adhesive joints of the bumps and the pads.

Note that the limitation "so as to facilitate deformation of the pad when the bumps are pressed against the pads and to form a space in which the insulating adhesive is filled" and "said joints being made by deformation of the pads" is merely product by process and therefore not given patentable weight.

Response to Arguments

Applicant's arguments with respect to claim 6 have been considered but are moot in view of the new ground(s) of rejection.
